About this document

All the safety and operating instructions should be read and followed before the unit is operated. This manual should be retained for future reference. The information in this manual was current when published. The manufacturer reserves the right to revise and improve its products. All specifications are therefore subject to change without notice.

Regulatory Notices

FCC Notice "Declaration of Conformity Information"

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Warning: Changes or modifications made to this equipment, not expressly approved by EverFocus or parties authorized by EverFocus could void the user's authority to operate the equipment.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference, and
- (2) This device must accept any interference received, including interference that may cause undesired operation.

EPTZ cameras comply with CE and FCC.

Precautions

1. Do not install the camera near electric or magnetic fields.

Install the camera away from TV/radio transmitters, magnets, electric motors, transformers and audio speakers since the electromagnetic fields generated from these devices may distort the video image or otherwise interfere with camera operation.

2. Never disassemble the camera beyond the recommendations in this manual nor introduce materials other than those recommended herein.

Improper disassembly or introduction of corrosive materials may result in equipment failure or other damage.

3. Try to avoid facing the camera toward the sun.

In some circumstances, direct sunlight may cause permanent damage to the sensor and/or internal circuits, as well as creating unbalanced illumination beyond the capability of the camera to compensate.

4. Keep the power cord away from water and other liquids and never touch the power cord with wet hands.

Touching a wet power cord with your hands or touching the power cord with wet hands may result in electric shock.

5. Never install the camera in areas exposed to oil, gas or solvents.

Oil, gas or solvents may result in equipment failure, electric shock or, in extreme cases, fire.

6. Cleaning

For cameras with interchangeable lenses, do not touch the surface of the sensor directly with the hands. Use lens tissue or a cotton tipped applicator and ethanol to clean the sensor and the camera lens. Use a damp soft cloth to remove any dirt from the camera body. Please do not use complex solvents, corrosive or abrasive agents for cleaning of any part of the camera.

7. Do not operate the camera beyond the specified temperature, humidity or power source ratings. Use the outdoor camera at temperatures within $-40^{\circ}C \approx +60^{\circ}C \leq 95\%$ / $-40^{\circ}F \approx +140^{\circ}F \leq 95\%$; this device is not rated as submersible. The input power source is 12VDC or 24VAC~ Be sure to connect the proper + / - polarity and voltage, as incorrect polarity or too high a voltage will likely cause the camera to fail, and such damage is not covered by the warranty. The use of properly fused or Class 2 power limited type supplies is highly recommended.

8. Mounting

Use care in selecting a solid mounting surface which will support the weight of the camera plus any wind, snow, ice or other loading, and securely attach the camera to the mounting surface using screws and anchors which will properly support the camera. If necessary (e.g. when mounting to drop ceilings) use a safety wire to provide additional support for the camera.

EverFocus

1. Introduction

The EPA6220 / EPA6236 1080p speed dome cameras come with 20x / 36x optical zoom lens respectively. Equipped with a weather-resistant (IP66) housing, the models meet a wide variety of needs for outdoor surveillance. The speed dome cameras support AHD, TVI, CVI and CVBS video formats, which are switchable via shortcut commends (please refer to *Appendix A Shortcut Commands*).

EPA6220 / EPA6236 provides variable pan / tilt speeds for fast and accurate monitoring. A maximum of 220 preset points can be configured for precise location of target areas. Features like A-B scan, 4 patterns, 8 tours are all provided. The speed dome cameras also feature IR-Cut Filter, which can be removed or attached manually or automatically switched based on the detected light levels. A built-in fan and heater are also equipped in the speed dome camera.

1.1 Features

- AHD 1080p Sony CMOS sensor
- 20x optical zoom lens (for EPA6220) / 36x optical zoom lens (for EPA6236)
- Supports UTC & RS-485 communication
- True Day and Night (IR-cut filter removable)
- Supports D-WDR
- Supports 220 preset positions
- Supports 8 tours (16 positions each tour)
- IP66-rated with metal housing
- Supports OSD menu

1.2 Dimensions

215mm / 8.46"

1.3 Packing List

- 1. Speed Dome Camera x 1
- 2. Wall Mount Bracket x 1
- 3. Power Supply (12VDC, 4A) x 1
- 4. Screw Kit x 1
- 5. Quick Installation Guide x 1

Note:

- 1. Equipment configurations and supplied accessories vary by country. Please consult your local EverFocus office or agents for more information. Please also keep the shipping carton for possible future use.
- 2. Contact the shipper if any items appear to have been damaged in the shipping process.

1.4 Optional Accessories

• Pole Mount Bracket

Corner Mount Bracket

Pendant Mount Bracket

• EKB700 Keyboard (RS-485)

2. Installation

2.1 Wall Mounting

You can use the supplied **Wall Mount Bracket** to install the speed dome camera to the concrete wall. Note that the wall should be withstood at least 4 times the weight of the speed dome camera.

Wall Mount Bracket

1. Mark the 4 screw holes on the wall based on the **Wall Mount Bracket** and then drill 4 screw-depth holes on the wall.

2. Run the cables through the **Wall Mount Bracket** and then screw the **Wall Mount Bracket** to the wall with M8 screws.

3. Screw the speed dome camera to the Wall Mount Bracket.

2.2 Corner Mounting

You can purchase the **Corner Mount Bracket** (please refer to *1.4 Optional Accessories*) to install the speed dome camera to the concrete corner wall with 90° angle. Note that the wall should be withstood at least 4 times the weight of the speed dome camera.

1. Mark the screw holes on the wall based on the **Corner Mount Bracket**, drill the screw-depth holes and then screw the **Corner Mount Bracket** to the wall with M8 screws and screw nuts.

 Run the cables through the Wall Mount Bracket and Corner Mount Bracket, and then screw the Wall Mount Bracket to the Corner Mount Bracket.

3. Screw the speed dome camera to the Wall Mount Bracket.

2.3 Pole Mounting

You can purchase the **Pole Mount Bracket** (please refer to *1.4 Optional Accessories*) to install the speed dome camera to a pole structure with diameter between 130-152mm (max. 6 inches). Note that the pole structure should be withstood at least 4 times the weight of the speed dome camera.

1. Fix the **Pole Mount Bracket** to the pole structure using the Stainless Hose Clamps (φ130-152mm).

 Run the cables through the Wall Mount Bracket and Pole Mount Bracket, and then screw the Wall Mount Bracket to the Pole Mount Bracket.

3. Screw the speed dome camera to the Wall Mount Bracket.

2.4 Ceiling Mounting

You can purchase the **Ceiling Mount Bracket** (please refer to *1.4 Optional Accessories*) to install the speed dome camera to the ceiling. Note that the ceiling should be withstood at least 4 times the weight of the speed dome camera.

Ceiling Mount Bracket

 Unscrew the M4 screws to remove the Bracket Base from the Ceiling Mount Bracket. Mark the screw holes on the ceiling based on the Bracket Base, drill the screw-depth holes and then screw the Bracket Base to the ceiling with M6 screws. You can optionally apply the silica gel to the faying surface between the Bracket Base and ceiling for water proofing.

 Run the cables through the Ceiling Mount Bracket, and then screw the Ceiling Mount Bracket to the Bracket Base. You can optionally apply the silica gel to the joint sleeve for water proofing.

3. Screw the speed dome camera to the **Ceiling Mount Bracket**.

2.5 Cable Connection

2.5.1 Coaxial and RS-485 Cables

The speed dome cameras support UTC function and RS-485 communication. You can control the speed dome cameras either through UTC (over coaxial cable) or RS-485 (RS-485 wires).

2.5.2 Power Cable

The speed dome cameras support dual power, 12VDC/4A and 24VAC~/3A.

In general, the power cable has resistance, there are internal losses when transmitting the voltage, the longer of the cable used, the smaller the wire diameter, the worse loss will suffer. In order to avoid losses of cable causing low voltage and keep the dome work properly, when processing wiring please refer to the requirement below:

Cable Diameter	0.5mm ² (20#)	1.0mm²(18#)	1.5mm²(16#)	2.5mm²(14#)
Dome Distance	11m(37ft)	18m(60ft)	29m(95ft)	46m(152ft)

For example, if a dome is 35 meters away from the power supply , power cable used must be more than 2.5mm², otherwise, the dome may suffer insufficient power supply and could not work properly.

Remark: The dome with 12VDC should be less than 3 meters away from power supply.

< SYSTEM >				
< DOME >				
< CAMERA >				
< DISPLAY >				
< LANGUAGE >				
< TIMING TASK >				
< ALARM >				
< RESET >				
EXIT				

4.1 System

MFG: Max 15 characters displayed on the screen.

PROTOCOL: Displays the protocol of the dome. To configure the value, go to DOME > COMM.

DOME ID: Displays the dome address. To configure the value, go to DOME > COMM.

COMM: Displays the baud rate, check bit, data bit, start bit. To configure the value, go to DOME > COMM.

TEMPERATURE: Displays the temperature of the dome.

VERSION: Displays the version of the dome.

4.2 Dome

4.2.1	COMM

MAIN MENU	DOME	сомм	
< SYSTEM >	< COMM >	DEVICE ID 160303	
< DOME >	IR DISPLAY >	CHECK ID 160298	
< CAMERA >	< GUARD TOURS >		
< DISPLAY >	< A-B SCAN >	TARGET ID 003	
< LANGUAGE >	< PAN SCAN >	SOFT PROTOCOL AUTO	
< TIMING TASK >	< PATTERN >	BAUD RATE 9600	
< ALARM >	< PARK ACTION >	COMM RESET	
< RESET >	< PRIVACY ZONE >	SAVE	
EXIT	< ADVANCED >	EXIT	

DEVICE ID: The device ID is auto generated by the system.

CHECK ID: To change the TARGET ID, please input the CHECK ID exactly same as the DEVICE ID displays on the screen.

TARGET ID: Target ID is available from 001 to 250, which can be used to distinguish several domes with the same ID.

SOFT PROTOCOL: Select a protocol for the dome.

BAUD RATE: Select a baud rate for the dome. Options include 1200BPS, 2400BPS, 4800BPS and 9600BPS.

COMM RESET: Enter to restore the COMM settings to factory default and then automatically restart the dome.

SAVE: Enter to save all the configurations. The dome will reboot.

EXIT: Exit the current menu.

4.2.2 IR DISPLAY

WORKING MODE: Select an IR working mode for Day/Night switch. Options include Auto, Off (color) and On (black & white). If Auto is selected, the dome will automatically switch from day to night mode when the illumination level is low; or automatically switch from night to day mode when the illumination level is high.

EverFocus

TESTING TIME: If Auto is selected from the IR working mode, you can set up a switch time (switch from day to night or night to day) to activate the switch action.

OUTPUT POWER: Select an output power. Options include 40%, 60%, 80% and 100%.

ILLUMINATION ON: Illumination on is 1 to15 grade selectable and default is 3. If Auto IR working mode is selected, when the Illumination On level is lower than the ambient light, the picture will change to color, the IR illumination will turn off automatically. When the Illumination On level is higher than the ambient light, the picture will change to black and white, the IR illumination will turn on automatically.

AMBIENT LIGHT: Ambient light is a system data. User cannot change it manually. The Ambient Light changes according to the environment all the time. The data will refresh every time when user enter the OSD.

IR SWITCH ZOOM: When zoom value reaches the demanded setting, the IR LEDs with auto switch from near illumination to far illumination.

EXIT: Exit the current menu.

4.2.3 GUARD TOUR

GUARD TOUR: Select a number to start setting the Tour function. Up to 8 tours can be set up.

SETTING: You can set-up up to 16 presets to each guard tour. Preset point is from 0-64 (0 is invalid). Dwell time is from 1 to 60s. Speed value is from 1 to 64.

GUARD TOURS			GUARD TOUR		01		
GUARD TOUR	01		ID	POINT	TIME	SPEED	
SETTING		≁	01	017	06	64	
INIT			02	018	06	64

EXIT	

DOME RESTART: Enter to restart the speed dome camera.

SYS DATA: Enter to restore the system data to factory default.

CAM DATA: Enter to restore the dome data to factory default.

PRESET: Enter to delete the setup preset points.

5. Specifications

Product Model	EPA6220	EPA6236	
Pickup Device	Sony CMOS sensor		
Output Pixels (H x V)	1920 x 1080 (30 / 25 FPS)		
Lens	20x optical zoom, 4.7~94mm	36x optical zoom, 4.6~165mm	
Video Format	AHD / TVI / CVI	/ CVBS switchable	
System Format	NTSC / PAL switchable		
Min. Illumination	Color: 0.01Lux ; B/W: 0.001Lux		
S/N Ratio	≥50dB		
Zoom Ratio	Max. 20x (optical)	Max. 36x (optical)	
True Day / Night	Supported		
BLC	On / Off		
WDR	D-WDR (auto)		
AGC	Auto		
WB	Auto		
Motion Detection	Not supported		
Defog	Not supported		
Privacy Mask	Not supported		
Alarm	Not supported		
Focus Control	Auto / Manual		
OSD Menu	Supported		
Video Output	1Vp-p, 75Ω		
IR LED	8 units		
IR Range	150m / 492ft.		
Auto Flip	Horizontal 180°, Vertical 93°		
Preset Points	220 preset points (dwell time 01-60s)		
A-B Scan	User programmable (scan speed 1-64)		
Tour	8 tours (max.16 preset points each tour)		
PWR on Action	Action (Memory), Off, AB Scan, 360, Home, Tour1, Pattern1		
Park Mode	Off, AB Scan, 360, Home, Tour1, Pattern1 (park time 1-60m)		
Pattern Scan	4 patterns (max.15 minutes, max.512 commands)		
Time Scheduling	6 tasks (AB Scan, 360 Pan, Tour 1-4, Pattern 1-4)		
Rotation Range	Pan: 0°~360°, Tilt: 0°~93°		
Rotation Speed	Pan: 0~480°/s, Tilt:0~240°/s		
Communication	RS-485, Coaxial		
Communication Speed	1200 / 2400 / 4800 / 9600bps		
Built-in Protocols	Pelco-P / Pelco-D (auto)		
Address Editable	Supported (OSD switch)		

ID Address	0~255		
Power Source	12VDC, 4A / 24VAC~, 3A		
Power Consumption	≤ 25W		
Weather Resistance	IP66		
Operating Temperature	-40°C ~ 60°C ≤ 95% / -40°F ~ 140°F ≤ 95%		
Package Size (W x D x H)	310 x 310 x 440mm / 12.2" x 12.2" x 17.32"		
Weight	12VDC: 6.1kg / 13.45lb		
	24VAC~: 7.15kg / 15.76lb		
Certificates	CE, FCC		

Appendix

A. Shortcut Commands

The speed dome camera supports AHD, TVI, CVI and CVBS video formats, which are switchable via shortcut commends. The shortcut commends are only compliant with Pelco-D and its extended protocol. Users can use the shortcut commend to enable the functions described as below:

Preset No.	Function	Preset No.	Function
81 (41)	Auto day/night	97	Call tour 2
82 (42)	Switch to night	98 (38)	Call tour 1
83	Switch to day	99 (39)	Pan scan
84	Force on far light	Twice 137	Switch to AHD
85	Force on near light	Twice 138	Switch to TVI
92	A-B Scan	Twice 139	Switch to CVI
94	OSD off	Twice 140	Switch to CVBS
95	OSD on	Twice 115	Switch to NTSC
96	Call tour 3	Twice 116	Switch to PAL

Note: If there is no video or the video is displaying black and white, please check whether the video signal output (NTSC / PAL) is compliant with the system format of your region.

B. Troubleshooting

Issue	Possible Reason	Solution	
After power is applied, there is no motion (self-test) and no video image	Cable harness is improperly connected	Verify that the orientation of the connector input	
	Input power voltage is too low	Verify the voltage of the input power	
	Power supply is not working	Change a new power supply	
Self-test is normal, but cannot control dome	Wrong communication settings	Set the correct protocol, baud rate and address of dome	
	Improper connection of control cable (polarity)	Verify the polarity of the RS485 connection per the instruction manual	
Noise after self-testing	Mechanical obstruction	Verify and correct it	
	Camera module is not installed correctly	Check the module installation	
	Low power	Change the correct power supply	
Image is not stable	Low power	Check the power supply or make sure the power input	
	Video cable is improperly contacted	Verify the contact of the video cable	
Image is hlurring	Camera is on manual focus	Change to auto focus	
inage is bluiting	The lens is dusted	Clean the lens	
Control to the dome is not smooth	Power is too low	Change the DC 12V Power supply	
	Communication distance is too far	Make sure the distance is in the allowed range	
	RS485 cable is not properly connected	Make sure the RS485 is properly connected	
	Too many domes connected	Make sure the quantity of the connected domes are allowed
